

Share of each model's variance explained, by model term

organoid_norm: each box summarises all fitted models
(patient x treatment x feature); 'residual' is the unexplained share

Share of each model's variance explained, by model term

organoid_norm_technical_model: each box summarises all fitted models (patient x treatment x feature); 'residual' is the unexplained share

Share of each model's variance explained, by model term

single_cell_norm: each box summarises all fitted models
(patient x treatment x feature); 'residual' is the unexplained share

Share of each model's variance explained, by model term

Share of each model's variance explained, by model term

organoid_agg: each box summarises all fitted models
(patient x treatment x feature); 'residual' is the unexplained share

Share of each model's variance explained, by model term

organoid_agg_technical_model: each box summarises all fitted models (patient x treatment x feature); 'residual' is the unexplained share

Share of each model's variance explained, by model term

single_cell_agg: each box summarises all fitted models
(patient x treatment x feature); 'residual' is the unexplained share

Share of each model's variance explained, by model term

single_cell_agg_technical_model: each box summarises all fitted models (patient x treatment x feature); 'residual' is the unexplained share

Unexplained (residual) variance across fitted models

Each observation is one fitted model (patient x treatment x feature)

$$\text{residual_pct} = (1 - R^2) \times 100$$

Variance explained by each term in the 20 best-explained models

What drives the 500 best-explained models? (organoid_norm)

Variance explained by each term in the 20 best-explained models

What drives the 500 best-explained models? (organoid_norm_technical_model)

Variance explained by each term in the 20 best-explained models

What drives the 500 best-explained models? (single_cell_norm)

Variance explained by each term in the 20 best-explained models

What drives the 500 best-explained models? (single_cell_norm_technical_model)

Variance explained by each term in the 20 best-explained models

What drives the 500 best-explained models? (organoid_agg)

Variance explained by each term in the 20 best-explained models

What drives the 500 best-explained models? (organoid_agg_technical_model)

Variance explained by each term in the 20 best-explained models

single_cell_agg: one bar per fitted model (patient | treatment | feature)
bars sum to 100% of that model's variance

What drives the 500 best-explained models? (single_cell_agg)

Variance explained by each term in the 20 best-explained models

What drives the 500 best-explained models? (single_cell_agg_technical_model)
